# SERVICE *No. 1041* BULLETIN

## PIPER CONSIDERS COMPLIANCE MANDATORY

Date: September 25, 2000

(S/M)

**SUBJECT:**

**Distribution of Airborne Service Letter Number 56,  
"Inspection and Cleaning of Airborne Air Filter Elements"**

**MODELS AFFECTED:**

**SERIAL NUMBERS AFFECTED:**

A guide to Models and Serial Numbers Affected is listed on pages 2 and 3. Because of the possibility of service spares installations, all models and serial numbers must be checked for applicability.

**Note:**

Many of the Piper models listed use the Airborne Air Filter Element, Part Number D9-18-1 (Piper Code 757-899). See the current Piper Parts Catalog for parts applications and locations of Airborne Air Filter Elements used on your particular Piper model.

**COMPLIANCE TIME:**

In accordance with the attached Airborne Service Letter Number 56.

***Caution:***

*Failure to comply with Airborne Service Letter Number 56 may result in loose particles contaminating the gyro vacuum/pressure system. Left uncorrected, reliability of the gyro vacuum/pressure system may be compromised.*

**PURPOSE:**

We have been notified by Parker Hannifin Corporation, Airborne Division, that the possibility exists where the airplane's gyro vacuum/pressure system may become contaminated by loose particles originating from the air filter element. To remedy this condition, Airborne has issued Service Letter Number 56, "Inspection and Cleaning of Airborne Air Filter Elements," which requires inspection and cleaning of the air filter elements and associated gyro vacuum/pressure system plumbing.

Left uncorrected, reliability of the gyro vacuum/pressure system may be compromised

**APPROVAL:**

The technical contents of this Service Bulletin have been approved by the FAA.

**INSTRUCTIONS:**

1. Refer to the attached Airborne Service Letter Number 56, "Inspection and Cleaning of Airborne Air Filter Elements," and follow the instructions listed under Recommendation.

**Note:**

If there is evidence of loose particles in the air filter element, the possibility exists that particles may have entered the gyro vacuum/pressure system, and therefore the entire gyro vacuum/pressure system and components may require inspection.

2. Upon successful completion of Airborne Service Letter Number 56, make an appropriate logbook entry of compliance with this Service Bulletin.

**MATERIAL REQUIRED:** N/A

**AVAILABILITY OF PARTS:** N/A

**EFFECTIVE DATE:** This Service Bulletin is effective upon receipt.

**SUMMARY:** Applicable Factory Participation is limited to new aircraft in warranty at the time of compliance. Factory Participation will remain in effect for a period of time **not to exceed 180 days** from the date of this Service Bulletin.

Please contact your Factory Authorized Piper Service Facility to make arrangements for compliance with this Service Bulletin in accordance with the compliance time indicated.

Please contact your Factory Authorized Piper Service Facility to make arrangements for compliance with this Service Bulletin in accordance with the compliance time indicated.

**NOTE:** If you are no longer in possession of this aircraft, please forward this information to the present owner/operator and notify the factory of address/ownership corrections. Changes should include aircraft model, serial number, current owner's name and address.

Corrections/changes should be directed to:

THE NEW PIPER AIRCRAFT, INC.  
Attn: Customer Services  
2926 Piper Drive  
Vero Beach, FL 32960

**Service Letter Number:** 56

**Date:** 4/19/00

**Subject:** Inspection and Cleaning of Airborne Air Filter Elements.

**Applicability:** Airborne Air Filter Elements with the following part numbers/date codes which have not been inspected per this service letter as identified in step number seven (7) of the procedure listed below. These components were shipped from Airborne between 1/1/99 and 3/31/00.

<u>Item</u>	<u>Part Number (P/N)</u>	<u>Date Code</u>
Air Filter Element	D9-14-3 (See Note1)	1AR thru 12AR and 1AT thru 3AT
Air Filter Element	D9-14-5 (See Note 2)	1AR thru 12AR and 1AT thru 3AT
Air Filter Element	D9-18-1 (See Note 3)	1AR thru 12AR and 1AT thru 3AT

**Note 1:** The D9-14-3 is used in the 1J2-2 Air Filter Assembly.

**Note 2:** The D9-14-5 is used in the 1J2-1, 1J2-5 and 1J2-6 Air Filter Assemblies.

**Note 3:** The D9-18-1 is used in the 1J7-1 and 1J7-2 Air Filter Assemblies.

**Background:** Field reports indicate the possibility that loose particles of a black elastomeric compound may not have been completely removed from these air filter elements during the manufacturing process.

**Recommendation:**

Within the next thirty days, inspect/clean the air filter elements listed above and also the associated pneumatic system plumbing per the following procedure:

- 1) Remove the affected air filter element from aircraft per the instructions outlined in the appropriate maintenance/service manual provided by the airframe manufacturer.
- 2) Inspect the inner diameter of the black end piece(s) of these elements for flashing (Figure 1). Remove all flashing using a sharp knife. Caution: Do not cut the paper filter portion of the element.

# Airborne

Air & Fuel Products

## **Service Letter Number: 56 (Continued)**

- 3) Tap the element lightly on a clean work surface in order to remove any loose particles from between the pleat tips on the inside of the paper filter (Figure 2).
- 4) Inspect the inner diameter (pleat tips) of the paper filter for black residue (Figure 3). Remove all loose residue using the "sticky side" of a strip of masking tape attached to the end of a blunt instrument.
- 5) Seal one end of the element using a plug. Then, use a heavy-duty vacuum cleaner (e.g. shop vac) to remove all loose particles from inside the element.
- 6) Thoroughly inspect all internal surfaces of the element for any loose particles. Remove any remaining loose particles using any combination of the above steps. Note: The wicking of black potting material onto pleats of paper filter is acceptable (Figure 4).
- 7) Identify the element as having been inspected per this service letter by permanently marking (ink stamp, magic marker, etc.) the number of this service letter ("56") on an exterior surface of the element. Note: This marking should be clearly visible once the element is installed back into the aircraft.

- 8) Remove the applicable pneumatic system hoses/lines as outlined below:

Vacuum System: Hoses/lines between system inlet filter and gyro instruments.

Pressure System: Hoses/lines between system inlet filter and dry air pump.

- 9) Clean hoses/lines using a heavy-duty vacuum cleaner (e.g. shop vac) and then reinstall.
- 10) Reinstall the clean air filter element per the instructions outlined in the appropriate maintenance/service manual provided by the airframe manufacturer.
- 11) Perform an operational check of the complete pneumatic system per the instructions outlined in the appropriate maintenance/service manual provided by the airframe manufacturer.
- 12) Any questions regarding this service letter should be directed to Airborne's Customer Support Team as follows:

Toll Free Phone Number: 800-382-8422

Direct Phone Number: 440-937-1315
