LETTER

Service Letter No. 266

February 19, 1956

TO: All Distributors, Dealers, Owners and Operators

SUBJECT: Throttle, Prop and Mixture Control Levers

MODELS AFFECTED: PA-23, Serials 23-1 to 23-449 inclusive

A few reports have been received from the field to the effect that the subject levers have been binding on the steel shaft in the control quadrant, causing simultaneous movement of levers other than the one being actuated.

These levers have now been modified in production to incorporate the use of an oilite bearing inserted in the aluminum throttle lever to prevent galling between the steel shaft and the aluminum lever.

Modification to the above mentioned Apaches can be accomplished in the field by installing Piper Kit 754 128. This kit is available through your nearest Piper distributor or dealer at a unit list price of \$.40.

Very truly yours,

PIPER AIRCRAFT CORPORATION
